

The Sweet Protection Ascender S.A.R. Mips is a specialized Search and Rescue helmet developed in close cooperation with the Norwegian Air Ambulance to provide the best possible protection in a wide variety of rescue operations. The light weight, low volume and incredibly strong construction provides excellent protection, as well as accommodating a platform for mounting accessories.

FEATURES:

- Top shell in pre-preg carbon fiber
- Bottom shell in Polycarbonate (In-Mold)
- Multi-density EPS shock absorbing material
- Mips: Mips is a rotational management system, specifically developed to help reduce rotational energies otherwise transferred to the head during an impact or crash.
- 5 penetration resistant vents
- Internal cooling channels
- 4 clips for attaching accessories/cables
- 360 micro adjustment fit system
- Supplied with adjustable head-phone/goggle mounts
- 4 threaded inserts in the front for mounting accessories such as NVG (accessories not covered by certification)
- Protective goggles sold separately with full RIG® lens technology programme for all weather conditions
